

# Advanced Least Cost Routing with Kamailio using CGRateS

**Dan Christian Bogos**  
dan.bogos@itsyscom.com

Kamailio World, May 2015

# Our Background

Located in Bavaria/Germany, over 8 years of experience with architecting server side solutions in VoIP environment

Platform implementations covering both wholesale and retail business categories

Responsibly understanding real-time processing constrains and the seriousness of live system outages

Advanced Least Cost Routing using CGRateS  
Kamailio World, May 2015

# About CGRateS

## Charging/Billing engine

Plug-able into existing billing infrastructure

Accommodate new components into ISP/ITSP network (eg: add new VoIP switch, SMS Service, Data stream)

Non-intrusive into existing setups

## Modular architecture

Easy to enhance by rewriting specific components - JSON/HTTP/GOB RPC API

## Performance Oriented

Built-in transactional cache system (data ageing, live counters)

Asynchronous processing with micro-threads

## Feature-rich

Multi-tenancy, derived charging, account bundles, LCR, CDRStats, rates history, etc

Agile in developing new features

## Test driven development

Aprox. 900 tests as part of the build system

Advanced Least Cost Routing using CGRateS

Kamailio World, May 2015

# About CGRateS (2)

## In a Nutshell, cgrates...

- ... has had 2,722 commits made by 6 contributors representing 55,066 lines of code
- ... is mostly written in Go with an average number of source code comments
- ... has a codebase with a long source history maintained by a average size development team with stable Y-O-Y commits
- ... took an estimated 14 years of effort (COCOMO model) starting with its first commit in January, 2012 ending with its most recent commit about 7 hours ago

## Languages

## Lines of Code

**Actively maintained**

\*stats provided by openhub.net

## RATING

- Functionality: calculate costs for events
- Isolated in calculations from other subsystems
- Fully cache driven, async processing
- Referenced from other subsystems (eg: Accounting, LCR)
- Standalone component, RPC/in-process accessible

## ACCOUNTING

- Functionality: maintain accounts with balances
- Partial cache driven (accounts are kept in dataDb/Redis).
- Async processing with account locking
- Real-time fraud detection/mitigation at account level during balance operations (locked stage).
- Queued/scheduled operations on accounts

## CDR SERVER

- Functionality:
  - store CDRs from various sources
  - rate CDRs using Rating subsystem
  - replicate CDRs (rated or raw ones) via RPC/HTTP to other servers
  - provide rated/raw CDRs to CDR Stats subsystem
- Asynchronous processing
- Standalone component, RPC/in-process accessible

## LCR

- Functionality: compute real-time LCR
- Fully cache driven, async processing
- Depending on strategy used, references real-time data from other subsystems (EG: Rating, Accounting, CDR Stats)

## HISTORY SERVER

- Functionality: archive rate changes using GIT in human readable JSON format
- Async, fully cached with scheduled disk dumps
- Standalone component, RPC/in-process accessible

## CDR STATS

- Functionality: calculate CDR stats in real-time based on data received from various sources
- Real-time fraud detection/mitigation with actions triggered.
- Async, fully cached
- Standalone component, RPC/in-process accessible

# CGR-LCR Overview

## Core component logic

Internally or remotely accessible through APler or RATER components  
Non-intrusive, injects supplier information into Kamailio pseudovariables

## Tightly coupled with ACCOUNTING subsystem

Provides LCR over bundles

## Integrate traffic patterns

Computes LCR for specific call duration

## Advanced profile selection mechanism

Filter on Direction, Tenant, Category, Account, Subject, Destination  
Weight based prioritization  
Activation time

## Extended functionality through multiple strategies

\*static, \*least\_cost, \*highest\_cost, \*qos\_thresholds, \*qos  
Flexible strategy parameters

## \*static

Classic way of LCR, suppliers ordered based on configured rule parameters

```
"*out,cgrates.org,call,1001,*any,DST_1002,lcr_profile1,*static,suppl2;suppl1,2014-01-14T00:00:00Z,10"
```

```
dan@dan-ThinkS: ~  
root@CgrDev1:~/cgrates/general_tests# cgr-console 'lcr Account="1001" Destination="1002"  
{  
  "DestinationId": "DST_1002",  
  "RPCategory": "lcr_profile1",  
  "Strategy": "*static",  
  "Suppliers": [  
    {  
      "Supplier": "suppl2",  
      "Cost": 0.6,  
      "QoS": null  
    },  
    {  
      "Supplier": "suppl1",  
      "Cost": 1.2,  
      "QoS": null  
    }  
  ]  
}
```

## LCR Strategies (1)

## \*lowest\_cost

Use supplier with least cost

```
"*out,cgrates.org,call,*any,*any,*any,lcr_profile1,*lowest_cost,,2014-01-14T00:00:00Z,10"
```

```
dan@dan-ThinkS: ~  
root@CgrDev1:~/cgrates# cgr-console 'lcr Account="1005" Destination="1002"  
{  
  "DestinationId": "DST_1002",  
  "RPCategory": "lcr_profile2",  
  "Strategy": "*lowest_cost",  
  "Suppliers": [  
    {  
      "Supplier": "suppl3",  
      "Cost": 0.01,  
      "QOS": null  
    },  
    {  
      "Supplier": "suppl1",  
      "Cost": 0.6,  
      "QOS": null  
    },  
    {  
      "Supplier": "suppl2",  
      "Cost": 1.2,  
      "QOS": null  
    }  
  ]  
}  
root@CgrDev1:~/cgrates#
```

## LCR Strategies (2)

## \*highest\_cost

Use supplier with highest cost

```
"*out,cgrates.org,call,1002,*any,DST_1002,lcr_profile1,*highest_cost,,2014-01-14T00:00:00Z,10"
```

```
dan@dan-ThinkS: ~
root@CgrDev1:~/cgrates# cgr-console 'lcr Account="1002" Destination="1002" '
{
  "DestinationId": "DST_1002",
  "RPCategory": "lcr_profile1",
  "Strategy": "*highest_cost",
  "Suppliers": [
    {
      "Supplier": "suppl1",
      "Cost": 1.2,
      "QOS": null
    },
    {
      "Supplier": "suppl2",
      "Cost": 0.6,
      "QOS": null
    }
  ]
}
root@CgrDev1:~/cgrates#
```

## LCR Strategies (3)

## \*qos\_threshold

Supplier with lowest cost, matching QoS thresholds min/max for ASR, ACD, TCD, ACC, TCC

```
"*out,cgrates.org,call,1003,*any,DST_1002,lcr_profile1,*qos_threshold,20;;2  
m;;;;;;;,2014-01-14T00:00:00Z,10"
```

```
dan@dan-ThinkS: ~  
root@CgrDev1:~/cgrates/general_tests# cgr-console 'lcr Account="1003" Destination="1002"  
{  
  "DestinationId": "DST_1002",  
  "RPCategory": "lcr_profile1",  
  "Strategy": "*qos_threshold",  
  "Suppliers": [  
    {  
      "Supplier": "suppl1",  
      "Cost": 1.2,  
      "QOS": {  
        "ACC": 0.35,  
        "ACD": 120,  
        "ASR": 100,  
        "TCC": 0.7,  
        "TCD": 240  
      }  
    }  
  ]  
}
```

## LCR Strategies (4)

## \*qos

Supplier with best quality, independent on cost

```
"*out,cgrates.org,call,1002,*any,*any,lcr_profile1,*qos,,2014-01-14T00:00:00Z,10"
```

```
dan@dan-ThinkS: ~
root@CgrDev1:~/cgrates# cgr-console 'lcr Account="1002" Destination="1005"'
{
  "DestinationId": "*any",
  "RPCategory": "lcr_profile1",
  "Strategy": "*qos",
  "Suppliers": [
    {
      "Supplier": "suppl1",
      "Cost": 1.2,
      "QOS": {
        "ACC": 0.9467,
        "ACD": 65.75,
        "ASR": 100,
        "TCC": 3.7868,
        "TCD": 263
      }
    },
    {
      "Supplier": "suppl2",
      "Cost": 1.2,
      "QOS": {
        "ACC": 0.8295,
        "ACD": 65.666666666667,
        "ASR": 100,
        "TCC": 2.4885,
        "TCD": 197
      }
    }
  ]
}
root@CgrDev1:~/cgrates#
```
